Which is Better - Fresh or Frozen Produce?

Frozen foods get a bad rap for being processed junk, but the truth is that some of the healthiest foods on the market are in the freezer section. As soon as a fruit or vegetable is picked, it begins to lose nutrients. By freezing fruits and veggies shortly after they're harvested, they're allowed to fully ripen, which means they're chock-full of vitamins, minerals and antioxidants, and freezing "locks in" many of their nutrients. Examination of frozen produce has revealed higher levels of antioxidants, including polyphenols, anthocyanins, lutein, and beta-carotene. Freezing also rarely destroys nutrients.

In one report, the vitamin C content in fresh broccoli plummeted by more than 50% within a week, but dipped by just 10% over an entire year when frozen. In addition to the superior nutrient profile (because freezing preserves food), no unwanted additives are needed in bags of frozen goodies, like spinach and strawberries. In addition, most frozen fruit and veggies packages include single-word ingredient lists - simply the fruit or veggie itself. Finally, frozen produce requires no washing, peeling or chopping. This makes it super easy to add to any meal at home when time is limited.
